Advanced

Managed ServersTM on Demand

...continued

All data centres are built to the same exacting standards with the level of investment expected in physical and electronic security, diverse communications paths, resilient and redundant power supplies and operated on a 24 hour a day basis by qualified and experienced industry professionals.

The Advanced Server is built around the HP ProLiant G5, with a 2u chassis capable of having 8 hot plug slots on-board SAS disks, making the server very versatile and allowing deployment as a web, application or database server or even all three wrapped together.

Popular Upgrade Options

Additional Options

- Advanced monitoring, reporting and notification
- Dedicated firewall
- Bandwidth upgrades
- Hardware upgrades
- "Intelligent Hands"
- Managed backup
- Patch management
- Additional remote disk storage space
- Off site storage
- VPN and SSL-VPN tunnels

Additional Disks

HP SCSI disks are available in 18, 36, 72, 146 and 300GB sizes. Please note that disks are only available in RAID sets either in pairs (RAID 1) or multiple sets (RAID 5)

Microsoft SQL Server

The industry standard database server software. SQL Server is priced on the number of processor in the physical server

SSL-VPN

As business becomes critical access to information from anywhere is required. SSL-VPN access provides easy and cost effective access for your mobile workforce

Advanced Reporting

Standard reporting provides the % availability of your service, and limited hardware features i.e. disk space, however advanced reporting provides a more in depth look and analysis of your server and access i.e. peak and average CPU performance....all through a secure online portal

Advanced Notification

Critical systems require up to date back ups and notification. 7global will let you know where and when incidents occur through email and SMS services
