Standard Managed Servers™ onDemand

...continued

All data centres are built to the same exacting standards with the level of investment expected in physical and electronic security, diverse communications paths, resilient and redundant power supplies and operated on a 24 hour a day basis by qualified and experienced industry professionals.

The Standard Server is built around the HP ProLiant G4, with a 1u chassis capable of having 2 hot plug slots on-board SCSI disks, making the server very versatile and is ideal for allowing deployment as a web or low end application server or simply for companies wishing to evaluate our hosting for the first time and learn the benefits.

Popular Upgrade Options

Additional Options

- Advanced monitoring, reporting and notification
- Bandwidth upgrades
- Hardware upgrades
- "Intelligent Hands"
- Managed backup
- Patch management
- Additional remote disk storage space
- Off site storage
- VPN and SSL-VPN tunnels

Additional Disks

HP SCSI disks are available in 18, 36, 72, 146 and 300GB sizes. Please note that disks are only available in RAID sets either in pairs (RAID 1) or multiple sets (RAID 5)

Backup Services

From NAS to Tape, daily to monthly and off site storage you can choose from a range of Data Service options to suit your back up and recovery plans.

SSL-VPN

As business becomes critical access to information from any where is required. SSL-VPN access provides easy and cost effective access for your mobile workforce

Advanced Reporting

Standard reporting provides the % availability of your service, and limited hardware features i.e. disk space, however advanced reporting provides a more in depth look and analysis of your server and access i.e. peak and average CPU performance....all through a secure online portal

Advanced Notification

Critical systems require up to date back ups and notification, 7global will let you know where and when incidents occur through email and SMS services
